

Mitchell Shelter

- Traditional Design
- True open cupola
- Galvanised post
- Pioneer post (timber) option available
- Painted roof frame option
- Hardwood roof frame

Outdoor Structures

Australia (OSA) has developed a traditionally styled rotunda suitable for areas where heritage styling is as important as function.

The shelter is supplied in kit form with all necessary hardware including the cage for the foundation bolts. Optional seating and handrails can also be supplied.

The cupola is a true open cupola rather than an afterthought added to a conventional shelter. This means that the shelter looks just right.

The shelter can be supplied with three different support options: galvanized, galvanized and powdercoated or with OSA's own Pioneer (timber) Posts.

OSA's Mitchell shelter can be supplied in either a 6m or 8m diameter.

Genuine cupola
