OSA's Authentic Japanese styled bridge was developed after considerable research into traditional designs.

By combining authentic styles with the most durable hardwoods grown in Australia, an exceptionally durable bridge is achieved.

Each bridge is a one off structure to suit a specific location so the owner's preferences can usually be accommodated.

To be more authentic, some domestic owners will require steps (as illustrated), but where the public have access a version without steps is available.
Australian Bridges designed for the Japanese Market

The Company, Outdoor Structures Australia (OSA), has researched and developed bridge designs of a traditional Japanese style. Bridges are individually designed to suit each location and to meet the purchaser's specific requirements. As illustrated, designs incorporating steps have also been developed. All bridges are constructed of Australian Hardwoods which have a very high durability in all outdoor environments.
